Sponsored by HOW TO BUY YOUR FIRST TELESCOPE

Camera tripod, making them the ultimate grab-and-go scopes. A refractor uses a lens, a roof telescope uses a mirror. A camera is a device that captures images, consists of a sensor and lenses. There are many types of cameras, from compact to professional. Choosing the right camera for your needs is crucial. Let’s dive into the world of cameras and find the perfect one for you.

The ESSENTIAL GUIDE TO DIGITAL PHOTOGRAPHY

The lens of a compact camera is designed to capture the image. The lens has a focal length, which determines the viewing angle of the image. The focal length is expressed in millimeters (mm). The smaller the focal length, the wider the angle of view. The larger the focal length, the narrower the angle of view. This is why wide-angle lenses have shorter focal lengths than telephoto lenses.
